new game

Selecting team automatically loads player info and goes to new game.

Team Creation

Team Name:

#32 Greg Reinold

#20 Manu Gindibili

+ Add player

new game

Add player creates pop up:

Name:

Number:

Position(s):

(Sport specific info)

i.e. for baseball, dominant hand for throwing/hitting

new game buttons lead to the interface of the desired sport. These will each be handled separately, but each one must have an options menu of some sort that allows the user to switch to a stats view of the current game. For example, basketball should have a stats screen that consists of tabs for play-by-play, box score, and shot chart of the current game. A sample menu was drawn up by Sam. With minor tweaks it can be applied to each sport. See next page for example for basketball stats layout.

The "view stats" button on the main menu brings the user to an interface that is similar to the in-game statistics menu but with the added ability to filter the results by player/game/date of game(?)
